

CARBON MONOXIDE GAS UNDERGROUND STILL IS CAUSE FARMER'S DEATH

Authorities Found Young Man Dead in Abandoned Mine

BLOSSBURG, Ala., April 15.—(I. N.S.)—Oxygen converted into carbon monoxide gas by a gasoline burner used to operate whiskey still in an abandoned mine near here caused the death of John Manning, a young farmer, authorities found today, when they raided the distillery. Two companions found unconscious were rushed to a hospital. They are expected to recover.

1930 Apr moonshiner found dead in mine
