

## **The Youngstown Mine Disaster.**

UNIONTOWN, Pa., Oct. 30.—The investigation into the Youngstown mine disaster was concluded this evening. A verdict will be rendered to-morrow. The general drift of the testimony was toward the theory that the explosion was caused by the gas from Flat 6 rushing through the door which the driver had neglected to shut and coming in contact with the miner's open lamp, thus being ignited. Nothing was developed to show negligence on the part of the company.
