

SAVE MAN THOUGHT DEAD.

Life Apparently Extinct, Pulmotor Revives Miner After Hour's Work.

POTTSVILLE, Penn., Aug. 29.—A remarkable case of the resuscitation of an apparently dead man by the use of the pulmotor is reported from St. Claire, when Joseph Mango, a miner employed in a colliery of the Reading Railway, ran into a pocket of mine gas, and when found by his companions life was apparently extinct.

Although the case seemed hopeless, three members of the first aid corps rushed for the pulmotor, with which the mines are provided, and began the

work of resuscitation. The body was first wrapped in seven blankets to retain any heat that might remain, and the machine for producing artificial respiration was operated vigorously. As they worked the men shouted loudly into the ears of the patient to breathe, and finally they were rejoiced to observe signs of life. Keeping up the work of pumping pure oxygen into the lungs of the man they had him breathing freely at the end of an hour and a half.

Persons who saw Mango when his apparently lifeless body was found, say the feat of bringing him back to life is unequalled in the coal regions. He is at his home, still very ill, but physicians say he will recover.
